

Product Name

NirmanBook Wardrobe configurator

Objective

Build a **3D configurator for modular wardrobes** that allows users to:

Configure → Visualise → Price → Commit

using a **preset modular system**

Core Problem

- Clients cannot visualise final wardrobe output
- Design-to-quotation cycle is slow
- Budget mismatch happens late
- High manual effort in creating drawings for non-serious leads

Core Solution

A **guided interface** that converts:

Room → Modules → Materials → Visual → BOM → Price

into a **real-time interactive experience**

2. Goals & Success Metrics

Business Goals

- Increase **client commitment rate**
- Reduce **design effort per lead**
- Enable **instant quotation**
- Establish NirmanBook as a **system-driven execution platform**

3. Users

Primary Users

- Interior designers
- Architects
- NirmanBook sales team

Secondary Users

- End customers

4. User Workflow

Create Project

Define Room Dimensions

Select Wardrobe Type

Configure Modules

Select Materials (CMF)

Visualise in 3D

View BOM

View Price

Select Services

Proceed to Commitment

5. Feature Breakdown

5.1 Create Project

Inputs

- Project name
- Client name
- Location

Output

- Project workspace

5.2 Define Room Dimensions

Inputs

- Wall width
- Height
- Depth constraints
- Openings (doors/windows)

Output

- 3D room shell

5.3 Wardrobe Type Selection

Options

- Sliding wardrobe
- Hinged wardrobe
- Walk-in wardrobe

5.4 Module Configuration (Core Engine)

Modules

- Pre set modules

Features

- Drag & drop modules
- Auto-fit within width

5.5 Material, Finish & Hardware Selection (CMF)

Inputs

- Board type (ply/MDF/etc.)
- Finish (lamine/veneer)
- Colour
- Hardware (standard/premium)

Constraints

- Predefined valid combinations
- Compatibility rules

5.6 3D Visualisation

Features

- Real-time update
- Rotate / zoom
- Material preview

MVP Note

- Start with simplified 3D (no photorealism)

5.7 BOM Generation

Auto-generate:

- panels
- hardware
- accessories
- Quantities

5.8 Pricing Engine

Inputs

- modules
- materials
- hardware
- size

Output

- total price

5.9 Services Selection

Options

- 2D drawings
- Installation
- Site measurement

5.10 Summary & Output

Display

- configuration summary
- visual preview
- BOM
- pricing
- timeline

Actions

- Download PDF
- Share
- Proceed to design fee

6. System Architecture (High Level)

Frontend

- Web-based configurator
- Responsive (desktop-first)

Backend

- Module library database
- Pricing engine
- BOM generator
- Rules engine

Data Structure

Entity	Description
Modules	Standard units
Materials	CMF library
Rules	Compatibility
Projects	User configs

7. Rules Engine

Examples:

- Minimum module width
- Maximum height limits
- Hardware compatibility
- Material constraints

8. UX Principles

- Visual-first
- Price always visible
- Minimal inputs
- Fast (<5 min flow)
